The maximum safe load of a chairlift is 500 lb. A cyclist rides the chairlift with his bicycle. The cyclist weighs 160 lb, and the bicycle weighs 30 lb. Which inequality best describes how much additional weight ( $w$ ) the chairlift could safely carry?

$$\begin{array}{l} \text{Cyclist +} \\ \text{bike +} \\ \text{add'l} \\ \text{wt} \end{array} \leq 500$$

$$160 + 30 + w \leq 500$$

$$190 + w \leq 500$$

$$w \leq 310$$

To help out a homeless shelter, your class brought in 52 blankets on Monday and 61 blankets on Wednesday. Write an inequality to describe how many blankets the class must donate on Friday to make or exceed their goal of at least 150 blankets.

Let  $b$  = # blankets on Friday

$$52 + 61 + b \geq 150$$

$$113 + b \geq 150$$

$$b \geq 37$$
